

Threads n Scissors

Enjoy Your Inspiration!!!

Injeanous Lace Lesson

This is by far the easiest lace you will stitch out. It's so easy, it's done in 3 steps. It stitches directly onto your fabric or clothing so there isn't any extra sewing needed like the lace appliques.

Are you ready to turn that ordinary piece of clothing into something fantastic?

Ready, Steady, Stitch!!!!

Method.

First print out your embroidery design in your embroidery software. You will need this print out to position your design on your clothing. Cut the design out of the printout and position on your clothing. Mark the centre of the design as well as the top, bottom and side centres.

Materials

Water Soluble Stabilizer

Needle to match fabric type

Embroidery Thread

Pair of sharp pointed scissors

Now hoop up two layers of water soluble and the clothing piece or fabric. Make sure the fabric / clothing is straight when positioned in the hoop. I use the plastic grids that came with my hoop for this. When your happy with the position, tighten the screw and your ready to start. I used one color throughout the design but you can use any colors you choose.

I use an embroidery needle on my machine for this No.75 / 11 130/705 H-E

If you are working on fine fabric be sure to use a needle for fine fabrics such as a microtex sharp needle. Stitch the first color of the design. Remove the hoop from the machine and trim away the fabric from inside the stitched areas. These are going to make the lace pieces. Use a pair of sharp scissors for this. Lastly, stitch the rest of the design. It's that easy!!!! When the design is complete, wash out the water soluble stabilizer.

Adding lace to clothing or other items couldn't be easier!!!
